

Datasheet for 500-301-262**Phosphotyrosine Antibody****Overview**

Description:	Anti-PhosphoTyrosine (Ascites) (MOUSE) Monoclonal Antibody - 500-301-262
Item No.:	500-301-262
Size:	100 µL
Applications:	ELISA, WB
Reactivity:	Phosphotyrosine
Host Species:	Mouse

Product Details

Background:	Tyrosine (Tyr or Y) or 4-hydroxyphenylalanine is a hydrophilic amino acid. In plants and most microorganisms, tyrosine and α -ketoglutarate are produced via prephenate, when oxidatively decarboxylated with retention of the hydroxyl group to give p-hydroxyphenylpyruvate, which is transaminated using glutamate as the nitrogen source. Mammals synthesize tyrosine from the essential amino acid phenylalanine (phe), which is derived from food. The conversion of phe to tyr is catalyzed by the enzyme phenylalanine hydroxylase causing the addition of a hydroxyl group. In its phosphorylated form, tyrosine is called phosphotyrosine. Tyrosine phosphorylation is one of the key steps in signal transduction and regulation of enzymatic activity. Protein kinases can tag on the hydroxyl group end with a phosphate group to some tyrosine residues causing a phosphorylated form. Tyrosine residues may also be modified by the addition of a sulfate group, a process known as tyrosine sulfation.
Synonyms:	mouse anti-Phosphotyrosine Antibody, mouse anti-pY antibody, PhosphoTyrosine reactive antibody, monoclonal phosphotyrosine, anti-phosphotyrosine produced in mouse
Host Species:	Mouse
Clonality:	Monoclonal
Clone ID:	13F9
Format:	ASCITES

Target Details

Reactivity:	Phosphotyrosine
--------------------	-----------------

Immunogen Type:	Other
Immunogen:	This monoclonal antibody was produced after repeated immunizations of balb/c mice with phosphotyrosine conjugated KLH.
Purity/Specificity:	This product is clarified ascites produced in balb/c mice using clone 13F9. Reactivity is specific for phosphotyrosine and minimal cross reactivity is observed against phosphoserine or phosphothreonine.

Application Details

Tested Applications:	ELISA, WB
Application Note:	This monoclonal antibody has been tested in ELISA and Western Blot and reacts specifically with phosphotyrosine and shows minimal reactivity by ELISA and competitive ELISA with phosphoserine or phosphothreonine. The antibody reacts with free phosphotyrosine, phosphotyrosine conjugated to carriers such as thyroglobulin or BSA, and detects the presence of phosphotyrosine in proteins of both unstimulated and stimulated cell lysates. Although not tested, this antibody is likely functional in RIA, flow cytometry, immunohistochemistry and immunoprecipitation. Phosphorylation of tyrosine residues is associated with many growth factors and oncogene protein kinases, and is important for cell signaling in activation, proliferation and differentiation.
Assay Dilutions:	All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.
ELISA:	1:4,000 - 1:20,000
WB:	1:500 - 1:2,000

Formulation

Physical State:	Liquid (sterile filtered)
Buffer:	None
Preservative:	0.01% (w/v) Sodium Azide
Stabilizer:	None

Shipping & Handling

Shipping Condition:	Dry Ice
----------------------------	---------

Storage Condition: Store vial at -20° C prior to opening. Aliquot contents and freeze at -20° C or below for extended storage. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.

Expiration: Expiration date is one (1) year from date of receipt.

Images

ELISA

ELISA of Mouse anti-phosphotyrosine antibody. Antigen: BSA conjugates of pT, pY and pS. Coating amount: 0.1 µg per well. Primary antibody: Phosphotyrosine antibody at 1:1000. Dilution series (X-axis): 2-fold. Secondary antibody: HRP conjugated Gt-a-Mouse IgG H&L secondary antibody at 1:20,000. Substrate: TMB (p/n TMBE-0100).

Western Blot

Western Blot of Mouse anti-phosphotyrosine antibody (clone 13F9). Lane 1: phosphorylated EGFR in an A431 cell lysate. Lane 2: total protein in the unstimulated A431 cells lysate after Coomassie staining. Load: 10 µg per lane. Primary antibody: phosphotyrosine antibody at 1:1000 for 1 hr at RT. Secondary antibody: IRDye™800 Conjugated Goat-a-Mouse IgG [H&L] (610-132-120) diluted 1:2,500 for 30' at room temperature. Block: 5% BLOTTO overnight at 4°C. Other band(s): phosphotyrosine splice variants and isoforms.
