Product Details

Background:	The high-mobility group box 1 (HMGB1) protein was originally identified as a highly conserved nuclear DNA-binding protein that participates in DNA replication, repair and transcriptional regulation of gene expression (1,2). However, HMGB1 has more recently emerged as an extracellularly released mediator of inflammation and repair responses in lipopolysaccharide (LPS)-induced endotoxemia and sepsis (3). HMGB1 has also been suggested to induce secretion of pro-inflammatory cytokines and chemokines by inducing NF-κB signaling downstream of Toll-like receptor (TLR) 2 and TLR4 activation (4).
Synonyms:	HMGB1 Antibody, HMG1, HMG3, SBP-1, HMG1, High mobility group protein B1, High mobility group protein 1, HMG-1
Host Species:	Rabbit
Clonality:	Polyclonal
Format:	IgG

Target Details

Gene Name:	HMGB1
Reactivity:	Human, Mouse, Rat
Immunogen Type:	Conjugated Peptide
Immunogen:	Anti-HMGB1 antibody was prepared from whole rabbit serum produced by repeated immunizations with a 19 amino acid peptide near the internal region of human HMGB1.

Purity/Specificity: Anti-HMGB1 antibody was affinity purified from monospecific antiserum by immunoaffinity chromatography. HMGB1 antibody is human, mouse and rat reactive.
