Product Details

Background:	MYCT1 was initially identified as a novel target of the c-Myc oncogene in myeloid cells. It is a widely expressed nuclear protein whose overexpression can promote apoptosis, alteration of morphology, enhancement of anchorage-independent cell growth, tumorigenic conversion, promotion of genomic instability, and inhibition of hematopoietic differentiation. MYCT1 binds to the promoters of several c-Myc-regulated genes and it has been suggested that the phenotypes seen in MYCT1-overexpressing cells are a result of the deregulation of these genes. RUNX1-ETO, a fusion protein made up of RUNX1 and ETO, is thought to deregulate the proliferation and responsiveness of human hematopoietic progenitor cells downstream of MYCT1.
Synonyms:	MYCT1 Antibody, MTLC, MTLC, MTMC1, Myc target protein 1, Myc target in myeloid cells protein 1
Host Species:	Rabbit
Clonality:	Polyclonal

Target Details

Gene Name:	MYCT1
Reactivity:	Human, Mouse, Rat
Immunogen Type:	Conjugated Peptide

Immunogen:	Anti-MYCT1 antibody was prepared from whole rabbit serum produced by repeated immunizations with a 17 amino acid synthetic peptide near the C-terminus of human MYCT1.
Purity/Specificity:	Anti-MYCT1 Antibody was affinity purified from monospecific antiserum by immunoaffinity chromatography. At least two isoforms of MYCT1 are known to exist; this antibody will detect both isoforms.
