Product Details

Background:	RNASET2 is a novel member of the Rh/T2/S-glycoprotein class of extracellular ribonucleases. It is a single copy gene that maps to 6q27, a region associated with human malignancies and chromosomal rearrangement, and has been suggested to function as a tumor suppressor protein. Its expression is suppressed in Human T-cell Leukemia Virus type 1 (HTLV-1) infected cells following the binding of the HTLV-1 Tax protein to the RNASET2 promoter. As Adult T-cell leukemia (ATL) is one of the primary diseases caused by HTLV-1 infection, a reduction in the level of RNASET2 by Tax may play a role in ATL development.
Synonyms:	RNASET2 Antibody, RNASE6PL, bA514O12.3, RNASE6PL, Ribonuclease T2, Ribonuclease 6

Target Details

Gene Name:	RNASET2
Reactivity:	Human, Mouse, Rat
Immunogen Type:	Conjugated Peptide
Immunogen:	Anti-RNASET2 antibody was prepared from whole rabbit serum produced by repeated immunizations with a 16 amino acid synthetic peptide near the C-terminus of human RNASET2.

Purity/Specificity:	Anti-RNASET2 Antibody was affinity purified from monospecific antiserum by immunoaffinity chromatography. Cross reactivity with RNASET2 from other sources has not been determined.
