Product Details

Background:	DR5 antibody detects human DR5 precursor. Apoptosis is induced by certain cytokines including TNF and Fas ligand in the TNF family through their death domain containing receptors. TRAIL/Apo2L is a new member of the TNF family. DR4 was recently identified as the receptor for TRAIL. A novel death domain containing receptor for TRAIL was more recently identified and designated DR5, Apo2, TRAIL-R2, TRICK2, or KILLER by several groups independently. Like DR4, DR5 transcript is widely expressed in normal tissues and in many types of tumor cells. DR5 binds to TRAIL and mediates TRAIL induced cell death. Overexpression of DR5 induces apoptosis and activates NF-alpha;B. Anti-DR5 antibodies are ideal for investigators involved in NFkappaB, Apoptosis, Cytokines and Growth factor research.
Synonyms:	DR5, KILLER, TRAILR2, TRICK2, ZTNFR9
Host Species:	Rabbit
Clonality:	Polyclonal
Format:	IgG

Target Details

Gene Name:	TNFRSF10B
Reactivity:	Human, Mouse, Rat
Immunogen Type:	Conjugated Peptide

Immunogen:	DR5 Antibody was produced from whole rabbit serum prepared by repeated immunizations with a peptide corresponding to 20 amino acids near the c-terminus of human DR5 precursor. The immunogen is located within the last 50 amino acids of DR5.
Purity/Specificity:	Anti-DR5 Antibody was affinity purified from monospecific antiserum by immunoaffinity purification. A BLAST analysis was used to suggest cross-reactivity with DR5 with Human and Mouse based on 100% homology with the immunizing sequence. Cross-reactivity with DR5 from other sources has not been determined. Antibody has no cross reaction to DR4.
