Product Details

Background:	The zinc finger protein 521 (ZNF521) is a transcription factor containing an N-terminal transcriptional repressor motif and 30 zinc finger domains. It plays a role in both erythroid cell and osteoblast differentiation during development, inhibiting the activities of early B-cell factor 1 (EBF1) in erythroid cells and Runx2 in osteoblast precursors. ZNF521 binds to both Runx2 and histone deacetylase 3 (HDAC3), promotes their association and antagonizes Runx2 transcriptional activity in a HDAC3-dependent manner, thereby regulating osteoblast differentiation, skeletal development, and bone homeostasis.
Synonyms:	ZNF521 Antibody, EHZF, Evi3, EHZF, LIP3, Zinc finger protein 521, Early hematopoietic zinc finger protein
Host Species:	Rabbit
Clonality:	Polyclonal
Format:	IgG

Target Details

Gene Name:	ZNF521
Reactivity:	Human
Immunogen Type:	Conjugated Peptide
Immunogen:	Anti-ZNF521 antibody was prepared from whole rabbit serum produced by repeated immunizations with a 19 amino acid synthetic peptide near the C-terminus of human ZNF521.

Purity/Specificity:	Anti-ZNF521 Antibody was affinity purified from monospecific antiserum by immunoaffinity chromatography. ZNF521 antibody is human specific.
