

Datasheet for 600-401-MS8S**SARS-CoV-2 Spike Protein (RBD) Antibody****Overview**

Description:	Anti-SARS-CoV-2 Spike Protein (RBD) (RABBIT) Antibody - 600-401-MS8S
Item No.:	600-401-MS8S
Size:	25 µL
Applications:	ELISA, IF, Other
Reactivity:	SARS-CoV-2
Host Species:	Rabbit

Product Details

Background:	SARS-CoV-2 (Severe acute respiratory syndrome coronavirus 2) the virus that causes the disease COVID-19, is related to SARS-CoV, MERS-CoV, and other betacoronaviruses (HKU1, NL63, OC43 and 229E). SARS-CoV-2 is an enveloped positive strand RNA virus that consists of several structural proteins including spike (S) protein, envelope (E) protein, membrane (M) protein and nucleocapsid (N) protein; and other non-structural proteins (NSPs). Spike proteins located on the surface of the virus, have a high affinity for binding to human receptor ACE2 (angiotensin-converting enzyme 2) within respiratory epithelial which serves as an entry mechanism for infection. As such, the S protein may be vital to blocking viral infection and vaccine development. Anti-SARS-CoV-2 Spike Protein Antibody is useful for researchers interested in diagnostics, vaccines, and viral research.
Synonyms:	rabbit anti-SARS CoV 2 Spike Protein Receptor Binding Domain Antibody, Spike glycoprotein antibody, SARS CoV2 antibody, 2019-nCoV, COVID-19, S glycoprotein, Severe acute respiratory syndrome antibody, Severe acute respiratory syndrome coronavirus 2 (2019-nCoV) (SARS-CoV-2)
Host Species:	Rabbit
Clonality:	Polyclonal
Format:	IgG

Target Details

Gene Name:	S
Reactivity:	SARS-CoV-2

Immunogen Type:	Conjugated Peptide
Immunogen:	This affinity purified antibody was prepared from whole rabbit serum produced by repeated immunizations with a synthetic peptide corresponding to an internal region of the SARS Coronavirus Spike Protein within the Receptor Binding Domain (RBD).
Purity/Specificity:	Anti-SARS-CoV-2 Spike affinity purified antibody is directed against SARS Coronavirus 2 Spike protein. The product was purified from monospecific antiserum by immunoaffinity chromatography over SARS CoV-2 Spike resin. BLAST analysis was used to suggest reactivity with related Coronavirus proteins. Cross reactivity with homologues from other sources has not been determined.

Application Details

Tested Applications:	ELISA, IF
Suggested Applications:	Other (Based on references)
Application Note:	Anti-SARS-CoV-2 Spike protein purified antibody has been tested for use in ELISA and IF. This antibody shows reactivity to recombinant SARS COV-2, S1 subunit protein and recombinant SARS COV-2 whole spike protein. Specific conditions for reactivity should be optimized by the end user.
Assay Dilutions:	All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.
ELISA:	1:150,000 - 1:450,000
IF:	1:1000

Formulation

Physical State:	Liquid (sterile filtered)
Concentration:	0.99 mg/mL by UV absorbance at 280 nm
Buffer:	0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2
Preservative:	0.01% (w/v) Sodium Azide
Stabilizer:	None

Shipping & Handling

Shipping Condition:	Dry Ice
Storage Condition:	Store vial at -20° C or below prior to opening. This vial contains a relatively low volume of reagent (25 µL). To minimize loss of volume dilute 1:10 by adding 225 µL of the buffer stated above directly to the vial. Recap, mix thoroughly and briefly centrifuge to collect the volume at the bottom of the vial. Use this intermediate dilution when calculating final dilutions as recommended below. Store the vial at -20°C or below after dilution. Avoid cycles of freezing and thawing.
Expiration:	Expiration date is one (1) year from date of receipt.

Images

Immunofluorescence Microscopy

Immunofluorescence assay using Rabbit Anti-SARS-CoV-2 Spike Protein (RBD) Antibody, showing viral protein detection. Vero E6 cells were either infected with the SARS-CoV-2 Washington isolate (INF) at an MOI of 0.1 or uninfected (UNI) for 24 hours. The cells were then fixed in 4% PFA and stained overnight at 4°C with primary antibodies directed against SARS-CoV-2 Spike (S) Protein at 1:1000 dilution. Imaged using an anti-rabbit secondary conjugated to AlexaFluor 568 [red] and Nuclear Counterstain DAPI [blue]. Image Courtesy of Mohsan Saeed Lab/Da-Yuan Chen, National Emerging Infectious Diseases Laboratories (NEIDL), Boston University.

ELISA

ELISA Results of Rabbit Anti-SARS Cov-2 Spike (RBD) Antibody. Each well was coated in duplicate with 0.5µg of rec SARS-Cov-2 S1 subunit [RED line], rec SARS Cov-2 whole spike protein [GREEN line], rec SARS Cov-2 spike glyco-S2 subunit protein [BLUE line], and rec MERS Cov spike/S1 protein [PURPLE line]. The working dilution for SARS-Cov-2 S1 is 1:419,000 and SARS Cov-2 whole spike is 1:12,700. The starting dilution of antibody was 10µg/ml and the X-axis represents the Log10 of a 3-fold dilution. This titration is a 4-parameter curve fit where the IC50 is defined as the titer of the antibody. SARS-Cov-2 S1 subunit IC50: 2ng/mL and SARS Cov-2 whole spike protein IC50: 79ng/mL.

ELISA

ELISA Results of Rabbit Anti-SARS Cov-2 Spike (RBD) Antibody. Each well was coated in duplicate with 0.5µg of BSA conjugated SARS-Cov-2 S1 (N-Term) [RED line] and BSA conjugated SARS-Cov-2 S1 (C-Term) [GREEN line]. The working dilution for BSA conjugated SARS-Cov-2 S1 (N-Term) is 1:239,000 and BSA conjugated SARS-Cov-2 S1 (C-Term) is 1:98,800. The starting dilution of antibody was 0.55µg/ml and the X-axis represents the Log10 of a 3-fold dilution. This titration is a 4-parameter curve fit where the IC50 is defined as the titer of the antibody. SARS-Cov-2 S1 (N-Term) IC50: 4ng/mL and SARS-Cov-2 S1 (C-Term) IC50: 10ng/mL.
