Product Details

Background:	Angiotensin-converting enzyme 2 (ACE2) plays a central role in vascular, renal, and myocardial physiology. In contrast to its homolog ACE, ACE2 expression is restricted to heart, kidney, and testis. Recently, ACE2 has also been shown to be a functional receptor of the SARS coronavirus. The normal function of ACE2 is to convert the inactive vasoconstrictor angiotensin I (AngI) to Ang1-9 and the active form AngII to Ang1-7, unlike ACE, which converts AngI to AngII. While the role of these vasoactive peptides is not well understood, lack of ACE2 expression in ace2-/ace2- mice leads to severely reduced cardiac contractility, indicating its importance in regulating heart function.
Synonyms:	ACE2 Antibody, ACEH, Angiotensin-converting enzyme 2, ACE-related carboxypeptidase, ACEH
Host Species:	Rabbit
Clonality:	Polyclonal

Target Details

Gene Name:	ACE2
Reactivity:	Human, Mouse, Rat
Immunogen Type:	Conjugated Peptide
Immunogen:	Anti-ACE2 antibody was prepared from whole rabbit serum produced by repeated immunizations with a synthetic peptide corresponding to amino acids near the internal region of human ACE2.

Purity/Specificity:	Anti-ACE2 Antibody was affinity purified from monospecific antiserum by immunoaffinity chromatography. Predicted species reactivity based on immunogen sequence: Mouse: (93%), Rat: (93%), Bovine: (93%). Anti-ACE2 has no cross response to ACE1.
