Product Details

Background:	The Akt signaling pathway contributes to the regulation of apoptosis after a variety of cell death signals. AKT1S1, also known as PRAS40, is a proline-rich substrate of the kinase AKT1 and is thought to play a role in neuroprotection mediated by nerve growth factor (NGF) after transient focal cerebral ischemia (1). AKT1S1 is also a substrate and potential regulator of mammalian target of rapamycin (mTOR), a serine/threonine kinase that regulates cell growth and cell cycle, and a negative regulator of autophagy (2). Treatment with the insulin-like growth factor-1 (IGF1) can induce the phosphorylation of AKT1S1 via the PI3K/AKT signaling pathway in PC12 cells (3).
Synonyms:	AKT1S1 Antibody, Lobe, PRAS40, Proline-rich AKT1 substrate 1, 40 kDa proline-rich AKT substrate
Host Species:	Rabbit
Clonality:	Polyclonal

Target Details

Gene Name:	AKT1S1
Reactivity:	Human, Mouse, Rat
Immunogen Type:	Conjugated Peptide
Immunogen:	Anti-AKT1S1 antibody was prepared from whole rabbit serum produced by repeated immunizations with a 19 amino acid peptide near the C-terminus of human AKT1S1.

Purity/Specificity: Anti-AKT1S1 Antibody was affinity purified from monospecific antiserum by immunoaffinity chromatography. AKT1S1 antibody is human, mouse and rat reactive. At least three isoforms of AKT1S1 are known to exist.
