

Datasheet for KCA003

Chemiluminescent Western Blot Kit for use with Rabbit Primary Antibody FemtoMax™

Overview

Description:	Chemiluminescent Western Blot Kit for use with Rabbit Primary Antibody FemtoMax™ - KCA003
Item No.:	KCA003
Size:	1 Kit
Applications:	WB
Reactivity:	Rabbit

Product Details

Background: This Chemiluminescent Western Blot Kit allows for the detection of primary Rabbit polyclonal or monoclonal antibodies provided by the user. After protein separation and transfer, the membrane is probed with primary antibody. Detection of the membrane bound primary antibody-antigen complex is achieved by the addition of a secondary antibody conjugated to the enzyme horseradish peroxidase. The enzyme reacts with a specialized formulation of luminol, an extremely sensitive, non-radioactive substrate that emits light and allows visualization using X-ray film or other imaging methods, including highly sensitive CCD cameras and imaging systems.

Because of the extremely high sensitivity of our FemtoMax® Chemiluminescent Substrate Kit for Western Blotting, primary and secondary antibodies can be used at greater dilutions. If you currently dilute your primary antibody 1:1,000 using an ECL substrate equivalent, then dilute your antibody 1:5,000 using the FemtoMax® substrate.

Synonyms:	Western Blotting Kit, Chemiluminescent Kit, Peroxidase Kit, Immunoblotting Kit
Detection Kit Type:	Chemiluminescent Western Blot Kit

Target Details

Reactivity:	Rabbit
Purity/Specificity:	This kit contains: anti-rabbit peroxidase, rabbit IgG control, BSA, tween-20, and Femtomax, along with the protocol and additional supplies. See kit insert for complete details and instructions.

Application Details

Tested Applications:	WB
Application Note:	Rockland Immunochemicals' Chemiluminescent Western Blot Kit, namely our FemtoMax™ Chemiluminescent Substrate Kit for Western Blotting, combines all of the necessary reagents with a rapid proven protocol and the extremely high signal detection of our luminol substrate. The Chemiluminescent Western Blot Kit design includes straightforward procedures and color-coding to allow for ease of use. This kit contains sufficient substrate for up to 30 mini blots at 7.5 x 8 cm ² and is stable for at least 1 year when stored at +4°C.
Assay Dilutions:	All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.
WB:	User Optimized

Formulation

Physical State:	n/a
Concentration:	none
Preservative:	Wash buffers MUST NOT contain SODIUM AZIDE or other inhibitors of peroxidase activity!

Shipping & Handling

Shipping Condition:	Wet Ice
Storage Condition:	See kit insert for complete instructions.
Expiration:	See kit insert for complete instructions.
