Product Details

Background:	IL-7 a hematopoietic growth factor secreted by stromal cells in the red marrow and thymus. It is also produced by keratinocytes, ¹ dendritic cells, ² hepatocytes, ³ neurons, and endothelial cells ⁴ . Interleukin 7(IL7) is a protein ⁵ that in humans is encoded by the IL7 gene. ^{6, 7, 8} Knockout studies in mice suggested that this cytokine plays an essential role in lymphoid cell survival. ⁹ IL-7 is a cytokine important for B and T cell development. This cytokine and the hepatocyte growth factor(HGF) form a heterodimer that functions as a pre-pro-B cell growth-stimulating factor. This cytokine is found to be a cofactor for V(D)J rearrangement of the T cell receptor beta(TCRB) during early T cell development.
