Datasheet for MB-007

10X TE pH 8.0

Overview

Description:	10X TE pH 8.0 (100 mM Tris HCl 10 mM EDTA) DEPC Treated - MB-007
Item No.:	MB-007
Size:	1 L

Product Details

Background:	TE buffer is a commonly used buffer solution in molecular biology, especially in procedures involving DNA, cDNA or RNA. "TE" is derived from its components: Tris, a common pH buffer, and EDTA, a molecule that chelates cations like Mg2+. The purpose of TE buffer is to solubilize DNA or RNA, while protecting it from degradation.
Synonyms:	10X TE pH 8.0 (100 mM Tris HCl 10 mM EDTA) Solution, 10X TE pH 8.0 DEPC TREATED Solution

Target Details

Relevant Links:	• MB-007 SDS

Application Details

Application Note:	TE buffer is a concentrated stock solution and should be diluted appropriately with distilled, deionized water or equivalent to its final working concentration. This buffer consists of 100 mM Tris HCl and 10 mM EDTA at a pH of 8.0. Meticulously prepared using ultra pure reagents dissolved in DEPC treated molecular biology grade water.
Assay Dilutions:	All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.

Formulation

Physical State:	Liquid (sterile filtered)
Concentration:	10X
Buffer:	See application note.

Preservative:	None
Stabilizer:	None

Shipping & Handling

Shipping Condition:	Ambient
Storage Condition:	Store container at room temperature (18° to 26° C) prior to opening. If desired, the solution may be stored at 4° C or less. Some salts may precipitate out of solution at lower temperature. Allow buffer to equilibrate to room temperature (18° to 26° C) to restore solubility of some salts.
Expiration:	Expiration date is six (6) months from date of receipt.
