

Datasheet for S000-18-2**TrueBlot® Streptavidin Magnetic Beads****Overview**

Description:	TrueBlot® Streptavidin Magnetic Beads - S000-18-2
Item No.:	S000-18-2
Size:	2 mL
Applications:	Biochemical Assay

Product Details

Background:	TrueBlot® Magnetic Beads are uniform, non-aggregating, super-paramagnetic beads consisting of a ferric oxide core functionalized with various silane groups. The super-paramagnetic nanoparticles are coupled with a biomolecule, such as Streptavidin, and are specifically designed, tested and quality controlled for magnetic purification of biotin-labeled components using manual or automatic platforms. Streptavidin magnetic beads are stable, pre-blocked beads with high binding capacity that provide rapid and efficient biomolecule purification from complex samples. Bead mean diameter is ~0.5 µm, bead concentration is 5.0 mg/mL, and binding capacity is ≥ 60 µg biotin/mg of beads.
Synonyms:	Magnetic beads, particles, microparticles, paramagnetic nanoparticles, magnets, protein antibody, DNA, SA, S avidin, streptococcus avidin, neutravidin, isolation, purification
Conjugate:	Streptavidin

Application Details

Suggested Applications:	Biochemical Assay (Based on references)
--------------------------------	---

Application Note: TrueBlot® Streptavidin magnetic beads can be used for immunoprecipitation (IP) of antigens (using biotinylated antibodies) from a wide variety of sources and to Co-immunoprecipitate interaction complexes using biotinylated antibodies. Streptavidin magnetic beads can also be used for protein-protein interaction in pull-down assays using biotinylated "bait" proteins and for isolation of biotin-labeled DNA-protein complexes from cell or tissue extracts. These beads are also applied for capturing single-stranded-biotinylated DNA oligos and for isolation of biotinylated PCR products.

Assay Dilutions: All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.

IP: User Optimized

WB: User Optimized

Other: Expiration Date: 11/30/2027

Formulation

Physical State: Suspension of Magnetic Beads

Concentration: 5.0 mg/mL antibody per cc agarose

Buffer: 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2

Preservative: 0.05% (w/v) Sodium Azide

Shipping & Handling

Shipping Condition: Wet Ice

Storage Condition: The Streptavidin Magnetic Beads should be stored in the refrigerator (2-8 °C). The reagent must be allowed to reach room temperature (20-25 °C) before use and may be used until the expiration date. Do not freeze, dry, or centrifuge the beads as they may result in loss of binding activity and aggregation.

Expiration: Expiration date is one (1) year from date of receipt.
